

Expected results

Efficient wastewater treatment. Removal of up to 90% of organic matter.

Production of renewable energy. Biogas composed of up to 80% methane.

Low operating costs. Reduction of up to 50% compared to aerobic processes.

Reduction of CO2 emissions - up to 13% reduction compared to aerobic processes.

Innovative self-sufficient and automated solution. 4.0 solution with decision support.

Ad-hoc design according to customer requirements. Reactor volume between 25-500 m³
